Deep Query Ask - Case Management

Salesforce Business Analyst Project Document

Project Name	Customer Support Case Management
Salesforce Cloud Used	Service Cloud
Role Focus	Salesforce Business Analyst
Document Basis	SkillWallet Deep Query Ask - Case Management

1. Project Overview

The organization wants to modernize and standardize how customer complaints and support requests are handled by implementing Salesforce Service Cloud as a centralized support system.

2. Problem Statement (AS-IS State)

The company currently manages customer support requests in a manual and unstructured manner using emails, phone calls, and Excel sheets. There is no centralized system to track customer complaints, resulting in delayed responses, inconsistent follow-ups, and poor visibility into case status.

Support agents lack a structured workflow, and management has no real-time insights into service performance. This negatively impacts customer satisfaction and operational efficiency.

3. AS-IS Business Issues

- Customer complaints received via email and phone calls
- Support team manually tracks cases in spreadsheets
- No centralized case management system
- No SLA tracking or escalation process
- Customers repeatedly follow up for status updates
- No visibility into open or overdue cases
- Difficult to measure agent workload and performance
- No historical data for audits or analysis

4. Business Impact (AS-IS)

- Delayed case resolution
- Poor customer experience and satisfaction
- Increased workload for support agents
- Inconsistent handling of customer issues
- No performance metrics for management
- Decisions based on assumptions instead of data
- Risk of SLA breaches and compliance issues

5. Business Objectives (TO-BE State)

The objective of this project is to implement Salesforce Service Cloud to standardize and automate customer support operations.

Key Objectives

- Capture all customer complaints in a single system
- Automate case creation and assignment
- Track case lifecycle from creation to closure
- Monitor SLAs and resolution timelines
- Improve communication with customers
- Provide real-time visibility through reports and dashboards
- Measure agent productivity and service quality
- Improve overall customer satisfaction

6. Scope Definition (BA View)

In Scope (Salesforce)

- Case creation (Email-to-Case / Web-to-Case)
- Case assignment rules
- Case lifecycle management
- SLA tracking using Entitlements
- Case escalation rules
- Reports and dashboards

Out of Scope

- Telephony (CTI) integration
- Chatbot or AI-based support
- ERP or billing system integration
- Knowledge base automation (optional future phase)

7. AS-IS vs TO-BE Comparison

Area	AS-IS	TO-BE
Case Tracking	Excel & Emails	Salesforce Cases
Assignment	Manual	Automated
SLA Tracking	Not available	Salesforce Entitlements
Customer Updates	Manual follow-ups	Automated notifications
Reporting	None	Real-time dashboards
Agent Performance	Not measurable	Data-driven metrics

8. TO-BE Process Flow (Future State)

1. Customer submits issue via email or web form
2. Case is automatically created in Salesforce
3. Case is assigned to the appropriate support agent
4. Agent works on the case and updates status
5. Customer receives status notifications
6. SLA is monitored throughout the lifecycle
7. Case is resolved and closed
8. Management reviews reports and dashboards

9. Data Model (Logical – BA View)

Object	Purpose
--------	---------

Account	Represents customer organization
Contact	Represents customer individual
Case	Tracks customer complaints/support requests
Case Comment	Stores communication updates
Case History	Tracks status and ownership changes
Entitlement	Defines SLA rules
Case Milestone	Tracks SLA milestones
User	Support agents

Data Relationships

- Account → Contact
- Account → Case
- Contact → Case
- Case → Entitlement
- Case → Case Milestones

10. Milestone Breakdown (BA-Driven)

Milestone Breakdown (BA-Driven) is a structured approach used by a Salesforce Business Analyst to divide a project into logical, manageable phases based on business goals rather than technical implementation steps.

Each milestone represents a business outcome that the Salesforce solution must achieve. The Business Analyst defines what needs to be accomplished at each stage, why it is needed from a business perspective, and how success will be measured. Technical teams (Admins/Developers) then implement the solution based on these defined milestones.

Milestone 1: Salesforce BA Foundation (Account & Navigation)

This milestone introduces Salesforce from a Business Analyst perspective. The focus is on understanding Salesforce, accessing it, exploring the user interface, and identifying where business data and processes live.

- Create a Salesforce Developer account
- Access Salesforce Setup
- Understand Salesforce UI from a BA point of view
- Identify where business data and processes live

Milestone 2: Salesforce Service Cloud Foundation

Objective: Understand Service Cloud features and navigation from a BA perspective.

- Understand Case object
- Identify support process requirements
- Review standard Service Cloud capabilities
- Deliverable: Process understanding document.

Milestone 2: Case Object & Fields

Objective: Ensure required business data is captured.

- Identify required Case fields: Case Type, Priority, Status, Origin, Description
- Define picklist values
- Deliverable: Field requirement document.

Case Type	Case_Type__c	Picklist	
Priority	Priority	Picklist	
Status	Status	Picklist	✓
Case Origin	Origin	Picklist	
Description	Description	Long Text Area(32000)	

Milestone 3: Case Creation Channels

Objective: Capture cases from multiple channels.

- Define case intake channels: Email-to-Case and Web-to-Case
- Define default values and ownership

Deliverable: Case creation flow diagram.

 **SETUP**
Email-to-Case

Settings

Edit

1

After you enable Email-to-Case, you can't disable it, but you can update its settings.

Enable Email-to-Case

 **Web-to-Case**

Use a simple web form or a self-service customer community to make it easy for customers to submit cases directly to your customer support group. For detailed information on setting up Web-to-Case or Self-Service Community templates, see the Salesforce help.

Milestone 4: Creation Web-To-Case

Web-to-Case allows customers to submit issues through a website form, which automatically creates a Case in Salesforce.

Milestone 5: Data Security Model

The Data Security Model in Salesforce is a framework that controls who can see, access, and modify data in an organization. It ensures that the right users have the right level of access to records while protecting sensitive information.

Milestone 6: Creating Assignment Rule

Ensure that every incoming customer case is automatically routed to the correct support agent or support queue based on defined business rules. This helps reduce response time, balance workload, and improve customer satisfaction.

 **Case Assignment Rules**

Edit Del	4	Case: Case Type EQUALS Technical Support	Technical Support Queue	☐

Why This Milestone Is Important (BA Context)

- Cases may remain unassigned
- High-priority cases may be delayed
- Agents may be overloaded while others are idle
- SLA breaches may occur
- Assignment rules ensure right case → right agent → right time

Objective

Ensure cases are routed correctly.

BA Activities

- Define assignment logic based on Case Type
- Define assignment logic based on Priority
- Validate workload distribution

Deliverable: Case assignment rules document.

11. BA Deliverables

- Process understanding document
- Field requirement document
- Case creation flow diagram
- Case assignment rules document

12. Conclusion

The project defines a Salesforce Service Cloud case-management solution that moves customer support from manual email, phone, and spreadsheet handling toward a centralized

and structured process. The document covers the AS-IS state, TO-BE objectives, scope, process flow, logical data model, and BA-driven milestones.
